

## Whirlpool Jets

MTI whirlpool baths are available with several different jet types. Each is described below. Custom jet placement and the addition of extra jets are also possible.

### Point-Massage Jet

The high-flow point-massage jet is the standard jet included in MTI Classic or Designer Series whirlpool packages. These high performance jets provide a straight and comfortable flow of water and are strategically placed to provide a targeted flow of water to the stress points on the body. Although the style of the jet is slightly different for the Designer and Classic Series tubs, the operation is similar. The jet is opened by rotating the jet nozzle, and closed by turning it in the opposite direction. Additionally, the flow rate is adjustable between full open and full closed. Further adjustment of the pressure can be made by using the air volume control. By opening the air volume control, more air is introduced into the jetted water for a “deeper” massage. Turn the air volume control down, and feel only jetted water for a softer massage. Extra point-massage jets may be added to many tubs. Please inquire when placing your order for more details on custom jet placement options.

### Rotary Jet

The rotary jet offers a softer, pulsating hydrotherapy massage. The jet features two openings and uses a spinning action while operating. To adjust the flow of water, simply turn the face of the jet in either direction.

A rotary jet may be substituted for a point-massage jet at no extra charge. However, MTI does not recommend changing all the point-massage jets in a whirlpool system to rotary jets, as this may diminish system performance. Extra rotary jets may also be added to whirlpool systems.

### Micro-Jet

Micro-jets provide pinpointed hydrotherapy, typically to the back or neck. To adjust or shut off the micro-jets' water flow, turn the volume control diverter valve.

Micro-jets are included in many Designer Series Ultra-Therapy Packages. Additional micro-jet packages are available as a set of 2 or 4 micro-jets, with or without a pump upgrade. A set of 6 micro-jets with a separate 1 bhp pump may be added to most MTI whirlpools. See following page. Please inquire when placing your order for more details on micro-jet placement options.

Note: Jet designs and styles are subject to change without notice.
